

Lab 9:

Using RDD and FlatMap count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark.

```
val textFile = sc.textFile("/home/bhoom/Desktop/wc.txt")
```

```
val counts = textFile.flatMap(line => line.split(" "))
                        .map(word => (word, 1))
                        .reduceByKey(_ + _)
```

```
import scala.collection.immutable.ListMap
```

```
val sorted = ListMap(counts.collect.sortWith(_._2 > _._2):_*)
// sort in descending order based on values
```

```
println(sorted)
```

```
for ((k, v) <- sorted) {
  if (v > 4) println(s"$k -> $v")
}
```

```
